

PETIMAGING

INTEGRATED PET/CT SCANNING CASE STUDY N° 95

Initial Staging Bladder Cancer

A 73 year old male is diagnosed with bladder cancer in March. Chest x-ray is negative, and abdominal and pelvic CTs reveal no lymphadenopathy. PET/CT discovers a 1 cm left supraclavicular lymph node with an SUV of 8.3, a small subcentimeter para-aortic lymph node with an SUV of 6.3, and at least one right sided iliac node measuring 1.3 cm with an SUV of 9.6.
